

# Sage 300

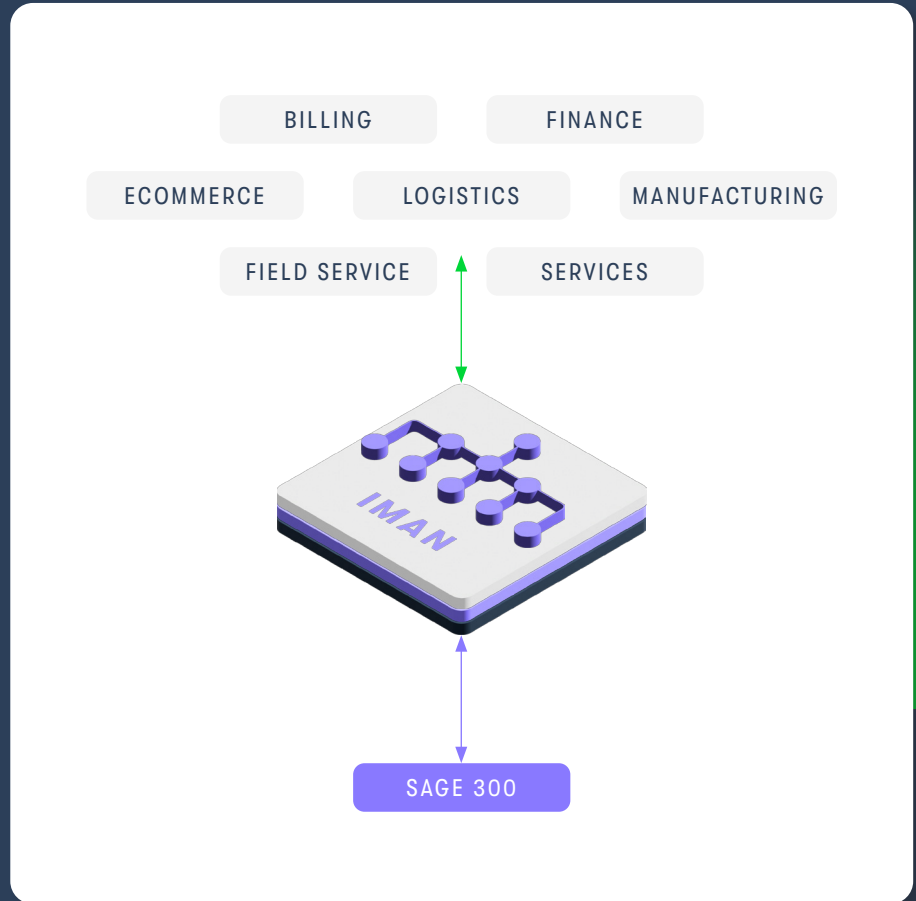

## Realisable IMan

IMan is a highly versatile configuration-based integration platform to connect any application or service with your Sage 300 cloud solution.

## Smart connectivity

IMan's smart connectors give you deep and rich connectivity with your business applications including:

- ECOMMERCE
- MARKETPLACES
- PURCHASE & PROCUREMENT/EDI
- MANUFACTURING SYSTEMS
- CRM
- PAYMENT PROCESSORS
- POINTS OF SALE
- SHIPPING & LOGISTICS
- DATA
- WEBSERVICES & WEBAPI

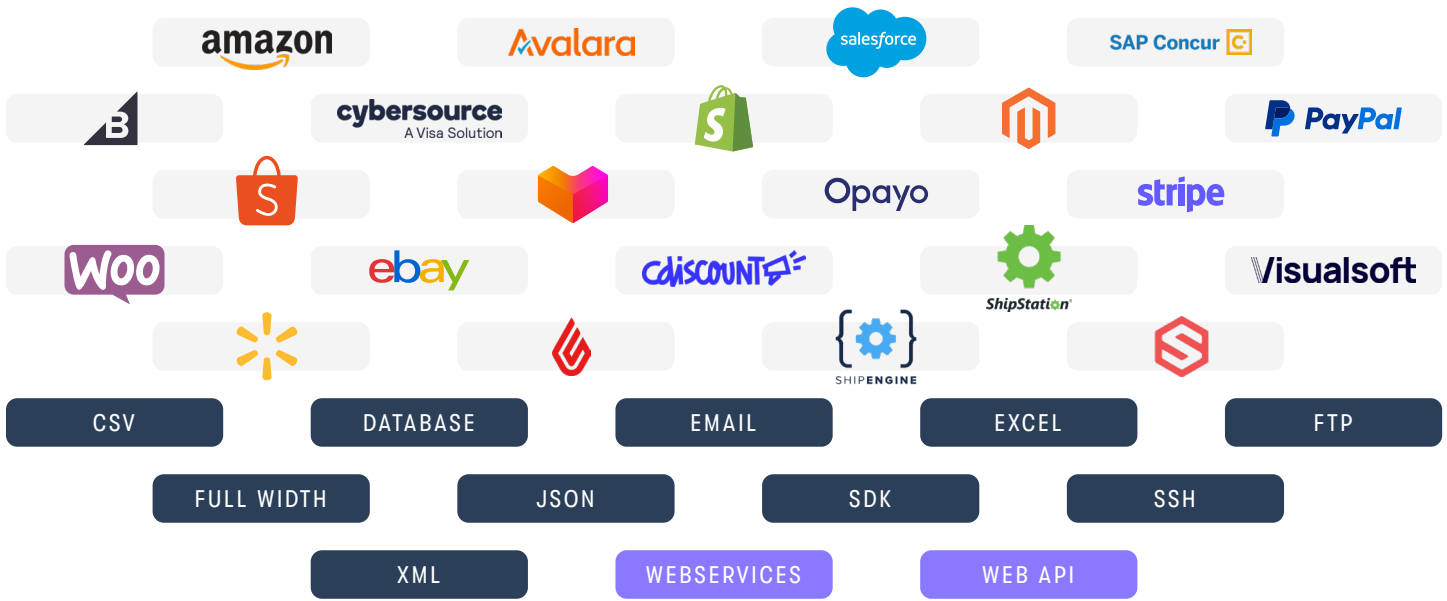

## Supported modules

- Accounts Payable
- Accounts Receivable
- General Ledger
- Inventory Control
- Order Entry
- Purchase Orders
- Project & Job Costing
- US & Canadian Payroll
- Common Services
- Third Party Modules

## Key features

- 100+ integration points covering support for all standard and some third party modules
- Print/export forms such as Order Confirmations, Invoices, Purchase Orders, Statements
- All integration is made through the Sage 300 views ensuring data is validated and business logic maintained
- All errors and warnings are logged. As our connector works through the views, errors and warnings are consistent with those generated when entering data manually
- Mass Data Load: Paired with the latest IMan release, our connector can handle 100,000s of transactions
- Seamless support for Sage 300 optional fields with easy mapping
- Update/delete functionality on some transactional and complex master data such as Orders, Shipment & PJC Contracts
- Import data across multiple companies simply with a single field value
- Full support for tax, multicurrency, lot & serial numbers and PJC
- Key transactional data (order and document numbers, batch Ids and entry numbers) are captured at time of processing, for detailed audit reporting and/or written back to the IMan dataset to facilitate complex transactional processing

### IMan Smart Application & Data Connectors

### Web API

- Create, host and publish REST based APIs using IMan’s visual designer
- WebAPI builds upon the existing IMan platform, giving IMan the ability to be both active component and offer integration-as-a-service
- Leverage IMan’s transformation and connectivity to handle any type of request
- Easily convert existing integrations to an API
- Monitor your APIs in real time
- Publish the APIs using the OpenAPI standard

### Webservices

- With comprehensive webservice integration capabilities, IMan allows you to integrate a wide variety of REST and SOAP type webservices
- Comprehensive REST support: IMan has comprehensive capabilities to consume or write to REST based webservices in both JSON & Xml data formats
- SOAP support: We can integrate with simple SOAP services
- Support for header based (Basic Auth) and OAuth authentication
- Support for complex queries involving multiple GET requests
- Configurable request paging and request throttling capabilities
- Text and Binary request and response types
